Technical Skills

Languages: Java/Kotlin, Python, JavaScript/TypeScript, C#, C, R, SQL
Frameworks & Libraries: Spring, Google Guice, PyTorch, TensorFlow, Pandas, FastAPI, .NET, React, Node.js
Cloud & DevOps Tools: AWS/Azure/GCP, Docker/Kubernetes, CloudFormation/Terraform, Git, Jenkins
AI & Data Tools: Bedrock, Claude, MCP, Kiro CLI, Cursor, MLflow, SageMaker, Kafka, Redshift, Plotly
Certifications: Amazon Web Services (AWS) Certified Solutions Architect - Associate (2024)
Specialties: Software/AI/ML Engineering, Data Science, System Architecture, Cloud Computing, MLOps

Professional Work Experience

Amazon Web Services — Vancouver, BC

Software Development Engineer II - Amazon Connect Conversational Analytics — March 2026 – Present

- Led customer-managed key (CMK) encryption rollout via **AWS KMS** across **4 services** in the conversational analytics pipeline, supporting **2B+ voice minutes annually**; designed a **3-gate** feature-flagged dual-path (legacy/CMK) scheme enabling a phased rollout to meet enterprise security demand with **no latency regression**
- Designed and implemented a **multi-agent oncall and development workflow** (**Claude**, **MCP**) adopted **team-wide**; an orchestrator sweeps tickets every 5 minutes and spawns log, investigation, judge, and summary agents, with hallucination guardrails and hooks blocking destructive prod actions, cutting response time from **30+ to under 15 minutes** across **100+ tickets weekly**
- Migrated post-contact summarization to direct **Amazon Bedrock** (**Claude Haiku**) calls across voice, chat, and email, serving **600M+ minutes/year**; built prompt and retry-aware client engine, legacy fallback routing, and **semantic-similarity** regression tests replacing flaky edit-distance checks, cutting latency by **10%**

Software Development Engineer II - Route 53 — March 2025 – March 2026

- Migrated Route 53 metering service to multi-shard delta processing architecture without billing errors for a service responsible for over **$50MM** in annual revenue
- Implemented change safety validation preventing deletion of Route 53 records with active alias dependencies, closing the failure class behind the October 2025 DynamoDB outage that impacted AWS services globally, protecting **2B+** records across **50M+** hosted zones
- Developed a routing policy that enables customers to configure DNS query fallback and failover behavior at Availability Zone (AZ) or Regional scope, achieving **sub-100ms P99** query resolution time during such failures
- Owned mitigation and root cause analysis for Route 53 TrafficFlow metering failure; debugged and fixed time-based validation logic enabling auto-recovery, and built amendment tooling to recover **$500K** in revenue within the 12-hour month-end billing deadline

Copperleaf Technologies — Vancouver, BC

Software Engineer II — February 2022 – March 2025

- Implemented secure digital signature workflows for data import/export across **40+ client instances** within a **2-month** timeframe, closing security gaps in data transfer operations
- Developed an automated Excel importer that parses and uploads customer data to GitHub Enterprise using JGit, increasing Customer Experience (CX) team efficiency and saving **400+ staff hours** annually
- Deployed proactive heartbeat tests with Cypress, Jenkins, and PagerDuty, enhancing system reliability and reducing Mean Time To Detect (MTTD) to **1 minute**
- Led localization initiative to support 10 new languages, enabling the application to reach its first **$1MM** revenue milestone and expand into new global markets

Software Engineer I — May 2021 – February 2022

- Led an 8-week C# code generator and converter project leveraging .NET asynchronous programming and Roslyn API, delivering a no-code solution that streamlined workflows, boosted CX velocity by **20%**, and achieved **99%** error-free code imports
- Optimized integration testing pipelines using JUnit and Mockito, reducing average runtime from 3 hours to **under 1 hour**, improving development and testing efficiency by **67%**

Education

University of British Columbia — Vancouver, BC

Master of Data Science, Specialized in Artificial Intelligence & Machine Learning (GPA: 90%) — 2024 – 2026

Bachelor of Applied Science, Major in Mechanical Engineering (GPA: 85.0%) — 2016 – 2021
